

29. Offshore circalittoral rock and biogenic reef

Sensitivity Assessment

Sensitivity scores for characterising ecological groups sensu Alexander et al. (2015), were obtained from Maher et al. (2014). See case report (Appendix 10) for details of ecological groups that characterise this feature. The overall sensitivity scores for each pressure comprise those scores for the ecological group(s) most sensitive to that pressure.

Table A11.29. Sensitivity assessment for offshore circalittoral rock and biogenic reef. Associated sectors include activities related to offshore renewable energy (O), Fishing (F), or shipping (S). NR = not relevant, NA = not assessed, NEv = no evidence, H = high, M = medium, L = low, VL = very low, N = none, NS = not sensitive. Refs = References.

Pressures		Associated sector(s)	Resistance				Resilience				Sensitivity				Group or species associated with score	Refs
Classification	Pressure type		Score	QoE	AoE	DoC	Score	QoE	AoE	DoC	Score	QoE	AoE	DoC		
Physical	Physical loss (to land or freshwater habitat)	O	N				VL				H	H	H	H	2, 3, 4, 5, 6(a), 6(b), 6(c), 6(d)	1
	Physical change (to another seabed type)	O, F	N				VL				H	H	H	H	2, 3, 4, 5, 6(a), 6(b), 6(c), 6(d)	1
